SOCE Corpus Registry v0.1

Eleven documented cases · structural signatures and provenance

Luis Bourguet · LabOnt — Centre for Ontology, Università degli Studi di Torino

v0.1.0 · July 2026

Registry rule

Every case is read against its documented diagnosis, never from memory. Each signature below is the validated output of that reading. Corpus items (new documents attached to an existing case) do not alter the case count.

1 · The eleven structural signatures

#	Case	σ [I·II·III·IV·V]	Dominant link	Shortcuts	τ
1	Spain 1492	E·E·E·D·E	I→II	V→I	τ_1
2	Jim Crow	E·E·D·E·P	IV→^{m}V	—	τ_2
3	Apartheid	E·E·D·E·P	II→IV	—	τ_2
4	Rohingya	E·D·E·D·E	I→V	I→V, III→V	puente
5	Colonial America	E·E·D·E·D	I→II	V→I double	τ_1
6	EU 2015	E·D^{-}·E·D·P	I→IV	I→IV, V→III	puente
7	Nazi	E·E·E·E·E	canonical max.	V→$^{+}$I	τ_1
8	AfD/Lukreta	P·D·E·P·P	III→IV	III→IV, III→V	aislado
9	MAGA	D·D·E·D·D	II→I	II→I, III→IV	τ_3
10	MORENA	D·E·E·D·P	II→I	II→I, III→V	τ_3
11	Patriot Front	L·E·E·P·D	III→IV	III→V, V→III	aislado

Documented Todorov vectors (read from diagnosis, never inferred): EU 2015 V=(3,4,3) · MORENA V=(4,2,4). Remaining cases: V is read from the case diagnosis on file.

2 · Families over the corpus

Family	Cases	Defining trait
τ_1 canonical-full	1, 5, 7	All links active, high intensity, I→II as motor
τ_2 braked at IV→V	2, 3	Economic limit modulates obedience→Other; px ≤ 3
τ_3 inversion II→I	9, 10	Ideology rewrites the record; contemporary democracies
puente (skip of II)	4, 6	I⇒V or I⇒IV; dense ideological elaboration bypassed
aislado (III motor)	8, 11	III⇒IV via aesthetic camouflage; extra-registral actor

Multiple realisations on record. τ_3 = {MAGA, MORENA}: same subgraph, opposed ideological sign. aislado = {AfD/Lukreta, Patriot Front}: same subgraph, opposed institutional position. Case 11's admission closed all three of its intake flags and converted *aislado* from singleton to type.

3 · Retrodictive validation on record

The prospective module was validated by retrodiction on three cases of known outcome: freeze the data at an early date, forbid everything later, project, compare against the real signature (read from the diagnosis).

Case (frozen at)	A_core	τ predicted	τ real	Chronology

MAGA (←2016)	Strong (personalist-restorative)	τ_3 (voiding)	τ_3 ✓	failed (9 years)
MORENA (←2018)	Strong (moral-historical)	τ_3 (capture)	τ_3 ✓	failed (6 years)
EU (←2014)	Weak (securitarian)	puente	puente ✓	failed (exogenous trigger)

Three topological-destination hits; chronology is declared outside the instrument's reliable range. The preregistered replication of this battery is the object of the OSF deposit that cites this registry's concept DOI.

4 · Corpus items and open flags

Case 9 · MAGA — corpus item: presidential speech, 4 July 2026. Registered as an item of Case 9, not a new case. Three flags remain **open** and are inherited by this registry:

1. Save America Act as candidate inscriptional escalation (Node I)
2. Internal "communist" Other with organic elimination metaphor (Node V reading)
3. Appropriation of the state commemorative apparatus as Node III extension

Open flags are closed only by explicit decision of the canonical authority; their resolution enters a subsequent registry version.

5 · Provenance

Case(s)	Source diagnosis
1–9	*Diagnóstico 9 casos — ciclo ontológico* (project document)
10	*Diagnóstico Caso 10 — MORENA* (project document)
11 + Case 9 item	*SOCE Corpus Update — 11 casos* (project document)

The underlying diagnosis documents are part of the project's internal corpus; they are cited here as the provenance layer of every signature and enter open deposit progressively as their clearance is confirmed.
